

## <ctab-folder> and <ctab-item>

Creates CTabFolder and CTabItem.

Example :

```
<?xml version="1.0" encoding="UTF-8" standalone="no" ?>
<shell>
  <fill-layout>
    <ctab-folder>
      <composite>
        <text>
          <style>
            <font>
              <name>BOLD</name>
              <size>16</size>
              <weight>bold</weight>
            </font>
            <text>TEST</text>
          </style>
        </text>
      </composite>
    </ctab-folder>
  </fill-layout>
  <ctab-item>
    <label>
      <style>
        <font>
          <name>BOLD</name>
          <size>16</size>
          <weight>bold</weight>
        </font>
        <text>TEST</text>
      </style>
    </label>
  </ctab-item>
</shell>
</ctab-folder>
</ctab-item>
</ctab-simple>
<!-- Select second Tab -->
</select>
</ctab-folder>
</shell>
```
